

## Choose Ecoduo

and create a space that harmonizes acoustic comfort with planet preservation.

The Ecoduo acoustic underlayment membrane is an **innovative solution** made from recycled synthetic fibers, reducing post-industrial and post-consumer waste. With a thickness of 3.2 mm, this membrane provides excellent sound insulation for residential projects and multi-story buildings while prioritizing environmental sustainability.

By choosing Ecoduo, you are opting for an eco-friendly approach that contributes to the preservation of natural resources and reduces carbon footprint. The Ecoduo membrane goes beyond being environmentally friendly; it also delivers exceptional acoustic performance. Its special composition effectively reduces the transmission of unwanted noises, such as footsteps, impacts, and vibrations, creating a calm and comfortable environment.

Additionally, Ecoduo is equipped with an integrated vapor barrier membrane, offering protection against unwanted moisture. This prevents issues related to condensation and mold, ensuring the durability and longevity of your flooring.

By selecting Ecoduo, you are choosing a high-performing product that also promotes environmental preservation. Its sustainable design and acoustic improvement make it an ideal choice for those seeking both comfort and environmental responsibility.

The Ecoduo acoustic underlayment membrane is an innovative solution that enhances sound insulation while embracing sustainability.

Manufactured from recycled synthetic fibers and featuring a vapor barrier membrane, it combines performance with environmental consciousness.
