Note A : Without prejudice to Article 17(2), the name of the substance must appear on the label in the form of one of the designations given in Part 3. In Part 3, use is sometimes made of a general description such as '... compounds' or '... salts'. In this case, the supplier is required to state on the label the correct name, due account being taken of section 1.1.1.4.

Note Q : The harmonised classification as a carcinogen applies unless one of the following conditions is fulfilled: — a short term biopersistence test by inhalation has shown that fibres longer than 20 µm have a weighted half-life less than 10 days; or — a short term biopersistence test by intratracheal instillation has shown that the fibres longer than 20 µm have a weighted half-life less than 40 days; or — an appropriate intra-peritoneal test has provided no evidence of excess carcinogenicity; or — no relevant pathogenicity or neoplastic changes are noted in a suitable long term inhalation test

Note R : The harmonised classification as a carcinogen applies except in the case of fibres with a Length Weighted Geometric Mean Diameter (LWGMD) minus two geometric standard errors greater than 6 µm, as measured in accordance with Test method A.22 in the Annex to Commission Regulation (EC) No 440/2008 (1).

SECTION 8: Exposure controls/personal protection

8.1. Control parameters

8.1.1 National occupational exposure and biological limit values

LydAir® MG™	
United Kingdom - Occupational Exposure Limits	
	Observe general threshold limit for dust.
Mineral wool, with the exception of those specified elsewhere in this Annex; [Man-made vitreous (silicate) fibres with random orientation with alkaline oxide and alkali earth oxide (Na₂O+K₂O+CaO+MgO+BaO) content greater than 18% by weight]	
United Kingdom - Occupational Exposure Limits	
Remark	In the UK, all MMMFs are currently subject to a workplace exposure limit (WEL) of 5 mg/m ³ total dust, or 2 fibres/ml (both 8 hour time weighted averages), whichever is reached first. Guidance on exposure limits: Although EH40 currently specifies dual WELs (both gravimetric and airborne concentration), the gravimetric limit is the most appropriate and will usually be achieved first. Therefore the appropriate exposure limit for mineral wool is 5 mg/m ³ total dust, 8 hour TWA. Wherever the dust exposure level is incapable of being predicted all applications must be assessed under COSHH3 by a competent person.
	Observe general threshold limit for dust.
